PROFESSIONAL SUMMARY

Software Engineer with 2+ years building AI-powered applications, scalable backend systems, and full-stack solutions across enterprise and academic environments. Specialized in Python, FastAPI, .NET, PostgreSQL, and Retrieval-Augmented Generation (RAG), with a record of shipping production-ready systems and automating complex workflows.

SKILLS

Programming: Python, C#, TypeScript, JavaScript, SQL, Java, C++
AI/ML: Machine Learning, Deep Learning, RAG, Prompt Engineering, Predictive Modeling, OpenAI API
Frameworks & Data: FastAPI, .NET, Angular, REST APIs, PyTorch, TensorFlow, scikit-learn, Pandas, NumPy
Databases & Tools: PostgreSQL, MySQL, SQLite, ChromaDB, Docker, Git, CI/CD, Linux, Jupyter Notebooks

EXPERIENCE

Student Programmer Sep 2025 – May 2026
South Dakota State University — IT Department Brookings, SD

- Maintained and enhanced the MyState and ConnectState platforms serving 10,000+ students and faculty, resolving 40+ backend defects across production releases.
- Debugged and shipped fixes to production deployments using C#, .NET, and SQL database workflows, cutting recurring ticket volume by 25% and improving release stability.

Software Developer Sep 2024 – May 2026
South Dakota State University — Structural Engineering Research Brookings, SD

- Built a C#/.NET structural-analysis application backed by SQLite for Maguire Iron, automating previously manual engineering load calculations and cutting per-project calculation time by an estimated 60%.
- Eliminated manual computation errors by validating outputs against verified benchmarks, and deployed a self-contained Windows installer for non-technical engineers.

Software Development Engineer Jul 2022 – Jul 2024
Siemens Technologies Gurgaon, India

- Developed a full-stack municipal water-supply management platform using Angular, .NET, REST APIs, PostgreSQL, and Docker, deployed to production for municipal operations.
- Migrated legacy AngularJS modules to Angular 14, reducing front-end load times by nearly 30% and improving long-term maintainability.
- Designed REST APIs and Dockerized services in an Agile team, improving deployment reliability and cutting environment-setup time on a 2-week release cadence.

Data Science Intern Dec 2020 – Jun 2021
HighRadius Technologies Bhubaneswar, India

- Performed exploratory data analysis, feature engineering, and ML model evaluation on financial datasets using Python, Pandas, and scikit-learn to support predictive-modeling initiatives.

PROJECTS

ClaimPilot: Explainable AI Claims Triage Platform github.com/Bad33/claimpilot
Python, FastAPI, OpenAI API, scikit-learn, PostgreSQL, Docker

- AI document-intelligence platform for claims ingestion, extraction, and triage, with explainability via evidence snippets, confidence scores, reason codes, and audit logs.

Enterprise Support Copilot github.com/Bad33/enterprise-support-copilot
Python, FastAPI, OpenAI API, ChromaDB, Docker

- RAG assistant using ChromaDB vector retrieval for source-grounded technical support, returning supporting snippets and metadata for full answer traceability.

Spatial Alert Prototype github.com/Bad33/Spatial-alert-prototype
Python, Flask, React, Vite, Leaflet, scikit-learn, XGBoost

- Geospatial emergency-alert prototype with interactive heatmaps and clustering, using Random Forest, XGBoost, and Isolation Forest for risk analysis and anomaly detection.

Research Publications — Co-authored ML healthcare analytics on AML mortality prediction, FAERS drug-safety analysis, and clinical-trial access mapping; published/accepted in *Blood* and *Clinical Lymphoma Myeloma and Leukemia*.

EDUCATION

M.S. in Computer Science, South Dakota State University Brookings, SD | Aug 2024 – May 2026
B.Tech in Computer Science and Engineering, KIIT University Bhubaneswar, India | Jul 2017 – Aug 2021
